TEST CASE

Test Case ID	Test Scenario	Preconditions	Steps to Execute	Expected Result	Actual Result	Status (Pass/Fail)
TC-CR-01	Create record with valid input (POST)	User is on Create Page	1. Fill all required fields 2. Click Submit	Record saved successfully	Record saved	Pass
TC-CR-02	Create record with blank fields	User is on Create Page	1. Leave fields blank 2. Click Submit	Validation error shown	Error message displayed	Pass
TC-CR-03	Create record with invalid input type	User is on Create Page	1. Enter text in numeric field 2. Submit	Error message shown	Error message shown	Pass
TC-RD-01	Retrieve records (GET)	Records exist	1. Open List Page	Records displayed correctly	Records displayed	Pass
TC-RD-02	Retrieve empty state	No records exist	1. Open List Page	"No records found" message	Message shown	Pass
TC-UP-01	Update existing record (PUT/PATCH)	Record exists	1. Open record 2. Edit fields 3. Save	Record updated	Record updated	Pass
TC-DEL-01	Delete record with confirmation	Record exists	1. Click Delete 2. Confirm action	Record removed	Record removed	Pass

TC-ERR-01	400 Bad Request handling	Invalid input	1. Submit invalid data	Proper error message	Error handled	Pass
TC-ERR-02	404 Endpoint error	Wrong URL	1. Access invalid endpoint	404 error shown	Error displayed	Pass
TC-ERR-03	API timeout handling	Server delay	1. Trigger request	Timeout message shown	Message shown	Pass
TC-NAV-01	Navigation across sections	User logged in	1. Click menu links	Correct page loads	Pages load	Pass
TC-UI-01	Button visibility & click	User on page	1. Check buttons 2. Click buttons	Buttons work	Buttons functional	Pass
TC-MOB-01	Mobile responsiveness	Mobile viewport	1. Resize screen	Layout adjusts properly	Layout responsive	Pass

BUG REPORT

Bug ID	Module	Severity	Steps to Reproduce	Expected	Actual	Screenshot	Status
BUG -01	Edit Booking (Update Form)	High	1. Open an existing booking 2. Set Check-In Date to 12/17/2025 3. Set Check-Out Date to 12/27/2025 4. Observe validation message	System should allow update since check-out date is after check-in date	Validation error displayed: "Check-out date must be after check-in date" even though dates are valid	Screenshot 1 – Edit Booking modal (Screenshot link below)	Open
BUG -02	Edit Booking (Form Validation)	Medium	1. Open Edit Booking modal 2. Enter valid dates 3. Scroll the modal	Error message should only appear when validation fails	Error message remains visible despite valid input, causing user confusion	Screenshot 1 – Edit Booking modal (Screenshot link below)	Open
BUG -03	Mobile Dashboard UI	Medium	1. Open system on mobile browser (Safari / iOS) 2. Load Dashboard page	Dashboard should be fully responsive and centered	Dashboard content is compressed to the left with excessive blank	Screenshot 2 – Mobile dashboard view (Screenshot link below)	Open

					space on the right		
BUG -04	Edit Booking (UX / Submission)	Low	1. Trigger date validation error 2. Attempt to click Update Booking	Update button should be disabled until error is resolved	Button remains enabled despite validation error	Screenshot 1 – Edit Booking modal (Screenshot of link below)	Open
BUG -05	Dashboard – Reports	High	1. Log in to the system 2. Go to Dashboard 3. Click Generate Report button	System should generate and download/display a report based on current data	Clicking Generate Report does nothing; no report is generated	Dashboard Screenshot (Screenshot of link below)	Open
BUG -06	Dashboard – Statistics	Medium	1. Log in to the system 2. Go to Dashboard 3. Observe percentage indicators 4. Refresh data	Percentage values should update based on latest data	Percentage values remain unchanged even after data updates	Dashboard Screenshot (Screenshot of link below)	Open
BUG -07	Dashboard – Statistics	Medium	1. Log in to the system 2. Go to Dashboard 3. Click statistic cards or percentage indicators	Statistic cards should be clickable and redirect to detailed pages	Statistic cards and percentage indicators are not clickable	Dashboard Screenshot (Screenshot of link below)	Open

TRACEABILITY

Requirement ID	Requirement Description	ISO/IEC 25010 Characteristic	Test Case ID	Bug ID	Impact
REQ-01	System must create records	Functional Suitability	TC-CR-01	BUG-01	High
REQ-02	System must display records	Usability	TC-RD-01	None	Low
REQ-03	System must update records	Reliability	TC-UP-01	BUG-02	High
REQ-04	System must delete records	Functional Suitability	TC-DEL-01	None	Medium
REQ-05	System must handle errors	Reliability	TC-ERR-01	BUG-01	Critical

System's Name: Hotel Management System
Developer's Name: Sean Paul G. Santos

RETEST LOGS

Requirement ID	Requirement Description	Test Case ID	Bug ID	Retest Verified
REQ-01	System must validate booking dates correctly	TC-UP-02	BUG-01	No
REQ-02	System must clear validation messages when input becomes valid	TC-UP-02	BUG-02	No
REQ-03	System must display a responsive dashboard on mobile devices	TC-DB-01	BUG-03	No
REQ-04	System must prevent form submission when validation errors exist	TC-UP-03	BUG-04	No
REQ-05	System must generate reports from dashboard data	TC-DB-02	BUG-05	No
REQ-06	System must update dashboard statistics dynamically	TC-DB-03	BUG-06	No
REQ-07	System must allow navigation from dashboard statistic cards	TC-DB-04	BUG-07	No

Notes:

- All bugs are marked “**No**” under *Retest Verified* because fixes have **not yet been implemented**.

PENETRATION TESTING

Test ID	Vulnerability Type	Method	Expected Result	Actual Result	Severity	Status
PT-01	Content Security Policy (CSP) Header Not Set	Automated scan using OWASP ZAP (HTTP header analysis)	Application should include a valid Content-Security-Policy header	CSP header was not detected in server responses	Medium	Fail
PT-02	Cross-Domain Misconfiguration (CORS)	OWASP ZAP CORS misconfiguration scan	Only trusted domains should be allowed	Access-Control-Allow-Origin: * detected, allowing all domains	Medium	Fail
PT-03	Missing Anti-Clickjacking Header	OWASP ZAP security header check	X-Frame-Options or CSP frame-ancestors should be present	Anti-clickjacking header not set	Medium	Fail

Or you can paste the result from OWASP Zap of before and after fixing:
